

2. Figure B. A trapezoid is a quadrilateral with exactly one pair of parallel sides.
3. Figure D. A rhombus is a quadrilateral with four congruent sides.
4. Figure F. A rectangle is a parallelogram with four congruent angles.
5. Figure C. A kite is a quadrilateral with two distinct pairs of consecutive congruent sides.
6. Figures A, D, and F. A parallelogram is a quadrilateral with two pairs of parallel sides.

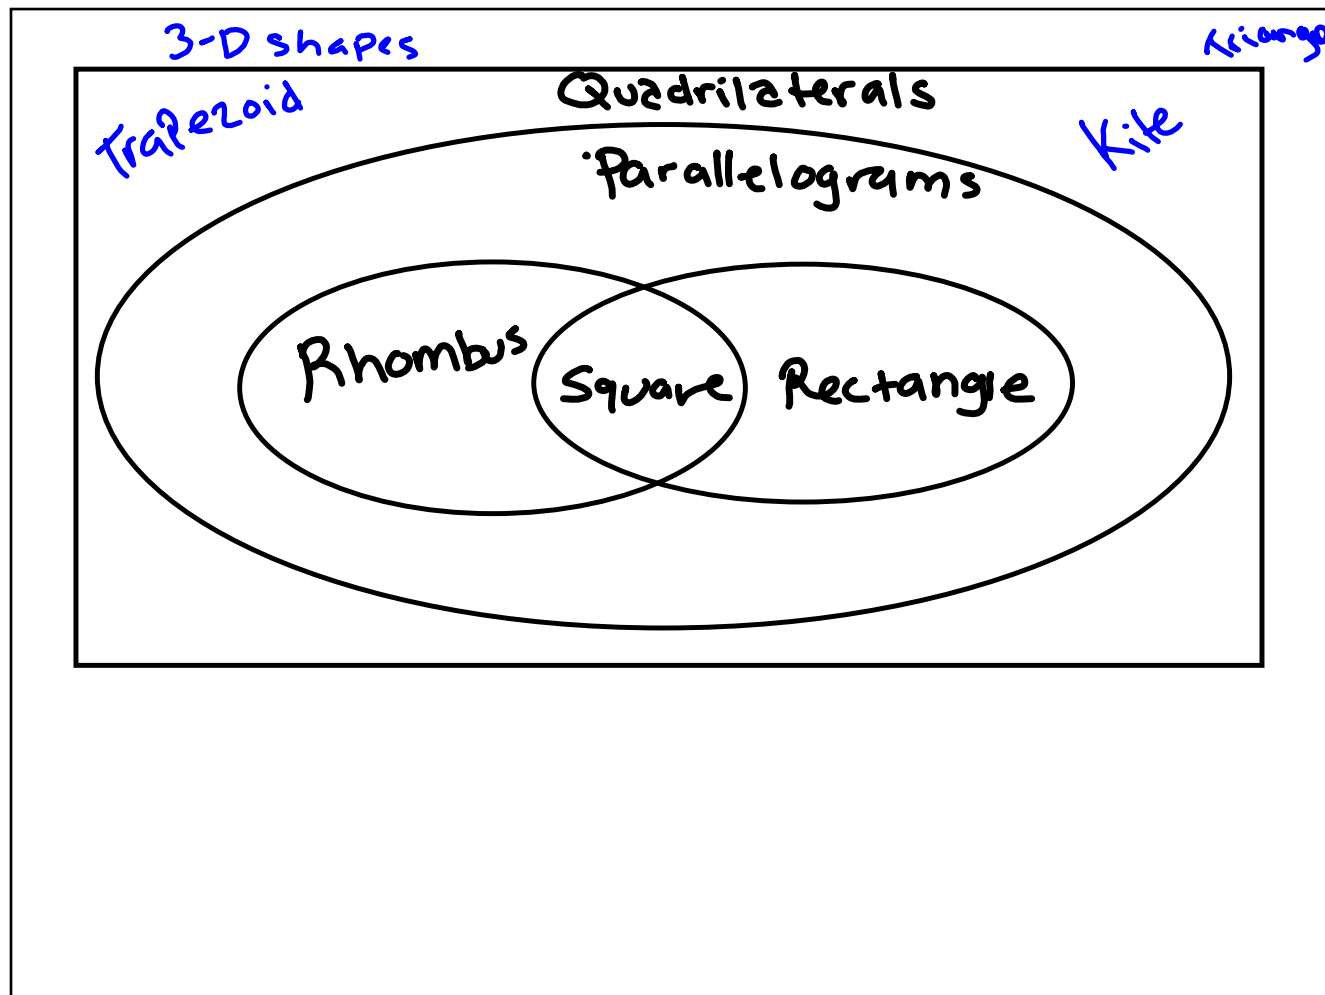

11. To have two outside diagonals, the hexagon must be concave with two "dents."

12. A regular quadrilateral has four congruent sides and four congruent angles. It is a square.

1.7 Circles

Circle - set of all points in a plane at a given distance from a given point

Center - the given point

Radius - the distance from the center to the circle

if you see a point at the center of a circle, you can assume it is the center

Investigation - page 65 (10 minutes)

Chord - A line segment whose endpoints lie on the circle

Diameter - a chord that passes through the center. A diameter is the longest chord.

Tangent - A line that intersects the circle only once

Can a chord of a circle also be a diameter of the circle? Can it be a tangent? Explain why or why not.

Can two circles be tangent to the same line at the same point?
Draw a sketch and explain

Congruent circles - have the same radius

Concentric circles - two or more coplanar circles that have the same center

Arc - two points on the circle and a continuous part of the circle between the two points

Arcs: semicircle, minor arc, major arc

$\overbrace{APD}^{\text{red}}$
 $\overbrace{DPA}^{\text{red}}$

$\overbrace{AP}^{\text{green}}$
 $\overbrace{PA}^{\text{green}}$

$\overbrace{PAD}^{\text{blue}}$

$\overbrace{DAP}^{\text{blue}}$

$\overbrace{DP}^{\text{purple}}$

Arc measure = central angle

A circle is **circumscribed** about a polygon if and only if it passes through each vertex of the polygon.

Circumscribed circle

Circumscribed circle

A circle is **inscribed** in a polygon if and only if it touches each side of the polygon at exactly one point.

Inscribed circle

Inscribed circle
