

Warm Up:

Solve for x:

$$x^2 - 11x + 10 = 0$$

$$4x^2 + 13x - 12 = 0$$

$$\therefore x = \{1, 10\}$$

x	x^2	$-1x$
-10	$-10x$	10

$$\therefore x = \left\{1, -\frac{3}{4}\right\}$$

$4x$	$4x^2$	$16x$
-3	$-3x$	-48

$$\therefore x = \left\{-16, \frac{3}{4}\right\}$$

$$\left\{4, \frac{3}{4}\right\}$$

$$\left\{-8, \frac{1}{2}\right\}$$

$$(4x-3)(x+16)=0$$

$$4x-3=0$$

$$4x=3$$

$$x=\frac{3}{4}$$

$$x+16=0$$

$$x=-16$$

Investigation on Sketchpad

Linear Pair Conjecture: If two angles form a linear pair, then the measures of the angles add up to 180 degrees

Vertical Angles Conjecture: If two angles are vertical angles, then

Find the measures of angles a , b and c .

Find the value of x and then the measure of both angles. $3x + 4x - 75 = 180$

$$7x - 75 = 180$$

$$7x = 255$$

$$x = 36.429$$

$$3x$$

$$3(36.429)$$

$$4(36.429) - 75$$

$$70.716$$
