Math Homework – U2:Week 5

7th

Monday	Tuesday	Wednesday	Thursday
Solve: $5x + 8 = 23$	Solve: $\frac{k}{4} + 1 = 1$	Solve: $1 = 13 + 6n$	Solve: $6n = 2n + 16$
A basketball team posts player foul shot ratios: <ul style="list-style-type: none"> • Jon made 18 of 19 • Jim got $\frac{5}{8}$ in • Joe wrote $.9\bar{4}$ Who was the better shooter?	Identify the like terms: $2x + 3y - 4x + 8 + y$	Solve: $2x = -46$	What do the following terms mean? Product: Quotient:
Solve: $5 + \frac{y}{8} = -3$	Solve: $20 = 2m - 16$	Solve: $10 - 3x = -23$	Solve: $14 = -2z + 4$
Identify the coefficients: $3x - 2y + 4 - y$	Solve: $2x + 8 = -2$	$-10 - 9$	Translate: The product of a number x and 3
Solve: $x - 4 = -9$	Translate: The sum of a number x and 32	$12.3 + 6.48$	Factor: $2x + 8y + 12$
Solve: $3x = 27$	Factor: $3x + 27$	$20 - -4$	Convert $\frac{2}{9}$ to a decimal
Translate: the quotient of a number x and 36	What is the difference between an expression and an equation?	What do the following terms mean? Sum: Difference:	$-6 + 4 - 12$
